EDUCATION

University of New South Wales (UNSW)

Feb 2024 – Nov 2026

Bachelor of Computer Science

- **WAM:** 78.313 (DN)
- **Relevant Coursework:** Calculus, Computer Systems Fundamentals (Assembly), Data Structures and Algorithms (C), Discrete Mathematics, Human Computer Interaction (UI / UX Design), Introduction to Business Databases (SQL), Linear Algebra, Object-Oriented Design & Programming (Java), Programming Fundamentals (C), Software Engineering Fundamentals (JavaScript), Web Front-end Programming (CSS, HTML, JavaScript)

Mercy Catholic College Chatswood

Jan 2018 – Nov 2023

Higher School Certificate (HSC)

- **ATAR:** 94.80
- Band 6 in Mathematics Advanced, Modern History, Business Studies, and Studies Of Religion I

EXPERIENCE

IT Administrator

April 2025 →

Blankisa

Sydney, NSW

- Monitored their systems for any issues, assisted staff with IT problems and set up new technologies.

PROJECTS

Accommodation Renting Web Application | *Bootstrap, CSS, Cypress, Git, HTML, JavaScript, Material UI, React.js, Tailwind*

- Developed a website which enabled users to rent and list properties using an inbuilt backend
- This included features such as registering a new user, logging in, logging out, editing listing details, making a new listing for a property, publishing a listing, booking a listing, writing a review, viewing all reviews for a published property, searching for properties by country name, a profit graph, filtering properties and receiving notifications specialized for guests and hosts
- The application was fully responsive and also accounted for accessibility by using a consistent, high contrast color scheme.
- Git was used to make meaningful and small commits gradually over the course of the project, ensuring version control.

Real Time Messaging Web Application | *Bootstrap, CSS, Git, HTML, JavaScript*

- Created a multi user messaging application using an inbuilt backend
- This had features such as creating and joining different channels, deleting, pinning, editing or reacting to image or text messages, receiving message notifications, editing channel details, inviting users to channels, leaving a channel, editing user profiles, infinite scroll and fragment-based URL routing
- The website was extremely responsive and was very accessibly through use of a consistent, high contrast color scheme and inclusion of aria labels or alt tags for non image elements.
- Git was also used to guarantee version control through consistent, low quantity commits.

Weather Web App | *CSS, HTML, JavaScript*

- Developed a web app using Vanilla JavaScript, HTML and CSS which allows users to view information regarding weather in a searched for country.
- Some features include searching for a country, viewing the temperature (celsius or fahrenheit), a 3 day forecast, wind, humidity, air quality, rain chance and the hourly forecast

TECHNICAL SKILLS

Programming Languages: Assembly, C, CSS, HTML, Java, JavaScript, LaTeX, Markdown, R, SQL

Technologies: Bootstrap, Cypress, Git, JUnit, Material UI, Moment.js, Next.js, React.js, Tailwind, Postman

Concepts: Data Modeling, Data Structures, Database Design, Database Normalization, Object-Oriented Programming, Version Control, Web Development

Softwares: Canva, Google Workspace, Microsoft Office, Procreate, R Studio, SQL Developer, VS Code
